Originally Answered: Did William Casey (CIA Director) really say, "We'll know our disinformation program is complete when everything the American public believes is false."?

Ex-DCI Bill Casey's quote was attributed online as reported only by Mae Brussell, and so, I bounced it off Barbara Honegger because I knew she worked for Mae B back in the day, and here's what I got on the ACTUAL SOURCE (talk about luck! - I extracted actual email addresses):

----- Forwarded message -----

From: Barbara Honegger  
Date: Sun, Sep 21, 2014 at 11:19 PM  
Subject: Re: Conference on THE WARREN REPORT AND THE JFK ASSASSINATION : FIVE DECADES OF SIGNIFICANT DISCLOSURES  
To: Greg Smith

I told Mae about it when we worked together ...

Thanks Barbara! That's priceless. The web attributes it to Mae B only, and therefore, it's discounted in chat and group conversations on social media. You might want to give it better street cred? Your call!

I am not familiar with that particular quote, but that sounds like the hubris of the CIA. You have to understand, you put a janitor in charge of the other janitors, and he becomes king shit of the janitors. And so it goes all the way to the point where you put someone in charge of an agency which no longer answers to the president, the senate, congress, the UN, or any force on Earth, there is no way you are not going to have anything but a problem. JFK wanted to dissolve them for that reason, 6 months later...

In the 1990s we had to change the policies regarding Diplomatic Identification and Immunity. These guys ran around the world committing every imaginable crime, drugs, weapons, with total immunity. It was a global disaster. The UN was unified on putting extreme limits on what Diplomatic Immunity meant. Today, if I pull out my Diplomatic ID for something that I shouldn't be doing, or for something as mundane as getting pulled over, I'll lose that Diplomatic privilege. National Security has zero tolerance for Misuse and Misconduct, these days.

All of this goes back to the CIA and the crap they pulled until Clinton put an absolute foot down on it. That was a campaign promise he made and actually kept.

If you really want to take the Dr. Bill acid test, go into Google AdWords. That is where they sell key words to the highest bidder so that their site floats to the top (no it is not 'free information highway,' that's how Google became a multi-billion organization). Watch the key words that are floating to the top. Take a screen capture.

Then, look at tomorrow morning's headlines in Google, Yahoo, MSN, etc. You will find that magically the minds of Americans predicted the next day's news. The headlines will be an amalgom of the key words

you saw in google adwords, which is a reasonable representation of the total Metadata of all communication.

This of course is not the case. That is, people did not predict the future. The headlines are generated by computer algorithm based on key word and metadata.

Metadata is the verbal content and meaning of every conversation. Even pure face to face verbal communication is gathered via drones.

The drones use doppler radar as a phased array approach. Meaning, the phased array doppler can detect air rarification, sweeping back and forth thousands of times per second. Air rarification is sound.

There are 20,000 such drones over US soil at all times, collecting every word of every spoken sentence. Human ears never hear this, its far too much. Its all scrubbed by computer. The NSA has fifty acres of extreme computers, working in tandom. They scrub every bit of data on Earth every second of every day. The computers are essentially super computers, about the size of a DVD player, stacked up 12 feet high, in rows like a giant library. There are golf carts for crossing it and doing maintenance.

The reason you can know these things is totally straight forward: you choose not to believe it, otherwise, not to care. Just like Snowden, you were excited for a few days, and just dont give a crap today, probably choose not to 'believe' it. Snowden wasnt a whistle blower. He was for the purpose of getting you used to the idea. Barometer, you gave a crap past tense; but dont give give a crap present tense. That was Snowdens job.

Russia and the United States are not separate countries, not since the Cuban Missile Crisis. It is one gigantic 60 Trillion dollar a year business venture. Almost the entire Global Domestic Product is the USA/Russia venture.

Use three different system cleaning apps on you pc with the wifi turned off, including cleaning your registry files. Turn the wifi on and just go to [Yahoo](http://Yahoo) homepage. Your computer will stall for a few minutes. Turn wifi off, close browser. Run the cleaners again. You will have two thousand tracking programs and about 350 MB DATA dumped onto your hard drive and operating system.

If you turn handshake, cookies, off, you cannot connect to any sight. The idea that 350MB, in the form of two thousand security files that 'track' your movements is just a normal computer thing is quite absurd. On your cell phone it is the same, clean it, connect, and run the cleaner again, half a gig of tracking software dumped onto your cell; this time tracking every spoken word.

The multi-trillion dollar surveillance of Americans that they told you is to 'protect you from terrorists,' and so on is not what they are doing. All cell phone calls (the verbal content, referred to as meta-data), emails, text, are monitored. Since the Patriot Act portion that allowed this to expire, they used the clause 'on American soil,' literally and monitor everything via the communications satellites. There are also an estimated 20,000 drones OVER (BUT NOT ON) US soil, monitoring verbal communications that are not electronic. This can be done via unidirectional microphone, or by bouncing a laser off your window. That includes car window.

The [Welcome to FBI.gov](http://Welcome to FBI.gov) web site collects information, but is easier to access at [Mass Shootings](http://Mass Shootings). In 2016 there were 384 mass shootings, almost 100 of which were listed as 'terrorist motivated.' So, the multi-trillion dollar surveillance network is not to 'protect you.'

The system is designed to gather information on the 'collective thinking,' like the Borg, of the American public, and then design tomorrow's news and media, literally overnight, to cattle herd you into a nice neat profile of behavior and commerce.

Again, take the acid test. Look at what you have access to, AdWords, and then watch tomorrow's headlines magically appear. At first you might think, well that's what people are interested in so that's what's in the news. Then, as you look at the flow of headlines regarding international campaigns, what the President said yesterday, what the senators and congressmen are doing or being accused of, it starts to get a bit freaky. Do this for several days, and you will see.

The more acidic portion of the test involves what is reported as either natural or otherwise human disaster or catastrophe. That is, the entire description of Chaos Theory tells us that all things in nature are not truly random, which is good. If anything in nature, from DNA to the arrival of photons from distant supernova (millions to billions of years ago) were truly random *the cosmos, particularly life, could not exist*. The cosmos has a strict set of rules and laws and constants, and mathematical descriptions (such as the variations of Relativity) that describe their behavior in a very predictable way. If it were not so, again, the cosmos (see Fine Tuning of the Cosmos; I don't know where) could not exist. For instance, if the cosmological density parameter were off in the 100th decimal place in the first few second of creation, the cosmos would have already expanded away (thermalized) or collapsed (big crunch).

**HOWEVER: if you look at the headlines, Chaos Theory cannot unwrap a pattern with respect to the reported events, which is a clear indication that the headlines are not telling you what happened.**

**Every time the president says the mantra: 'fake news,' you reject that (reinforcement, Rational Charisma) and tell yourself the *News Is Real*.**

All of the metadata, meaning the content, is 'scrubbed,' petaflops per second, so much that even humans cannot monitor their own communication. So, human eyes simply cannot, nor do they, try and look at your content; it is of no interest. The item of interest is the collective. All electronic is via satellite, which is the conduit of all electronic communication.

Acid level three, failure: Putin, Pissing, Prostitutes, President, Porn... a failure of a sub algorithm. Obvious, and embarrassing, pres trump says yeh, but i wasnt president then... And thats ok, the other man who holds half the nukes on earth entertains over vodka with pissing prostitutes, and everyone just shrugged it off.

You are so drugged by media and myth you dont even see that as a problem. Further below, is the fact that you have been rendered illiterate, because knowledge is enemy number one. You didnt read Huckleberry Fin not because of racial slurs, as myth painted for you, but because you cannot read nineteenth century Standard English. Try. You cant do it, nor Moby Dick.

Today is SSE 500, Simplified Standard English, 500 word vocabulary. Grammar was a four volume set, now, a 23 page booklet.

The drones used a version of Phased Array technology, which is where the Bose speakers came from. You set up a classic wave (picture this in your bathtub) and time a second wave such that when they cross each other, the amplitude is highest at some distance (usually about a meter for both RADAR and sound, e.g. Bose speakers) and a *virtual wave* (sound or RADAR) is formed of much greater size. That's why a

tiny 2" set of Bose speakers sounds 10 feet tall. *You can also use this to make a virtual parabolic dish; such as in the listening dish. The drones use this phased array technology to 'listen' from great distances to non-electronic communication. However, this requires an individual drone for every application, leaving us with 20,000 drones at 10 million each, 2 trillion dollars worth of paranoia drones.*

Keep in mind the people who invent this stuff are very highly educated, and enjoy nothing more than to get paid to slap these technologies together. ***HOWEVER: The people who order it done are as educated as a bag of hammers.***

In any case, no Chaotic pattern can be isolated from the news, or commerce, regardless of content, *because it, like commerce, is contrived, not real. Any real events would follow some type of pattern that has at least a limited pattern; the events reported are truly random; AKA unnatural. If you exclude therefore human events, and only focus on 'reported' natural catastrophe, it is still truly random, meaning it cannot occur in nature.*

If this doesn't convince you, you fit a nice neat profile of behavior and commerce. Furthermore, *I don't care.* You are fracked rather you know it or not.

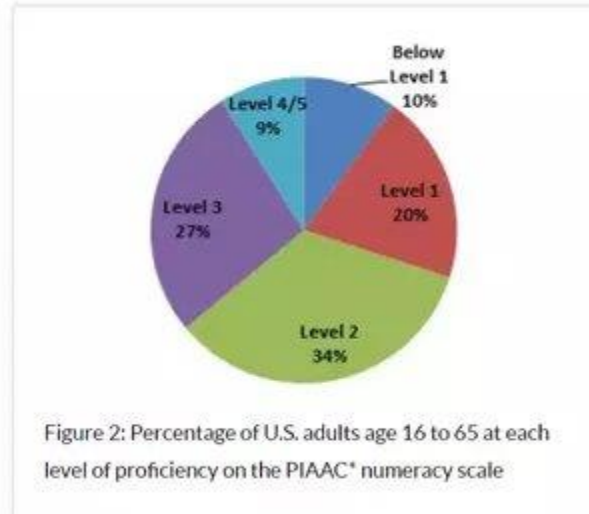

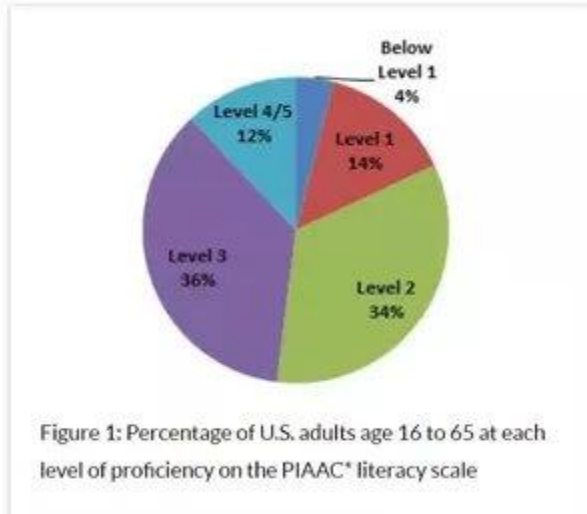

Otherwise, explain the multi-trillion dollar surveillance network's failure to prevent 384 mass shootings last year, of which about 1 in 4 were 'terrorist motivated,' and I think we already passed that number this year.

You know the system is in place, the NSA admitted it publicly. The reason they say it is there is obviously not true, as per a hundred terrorist motivated events each year, hundreds of mass shootings, most of which never make it into the 'fake news.'

Every time the President says 'fake news,' your brain says 'conspiracy theory,' and hardens your cognitive belief, your religion, the media.

That is why Bob cannot put Santa on his lawn, Muhammad is offended, and Sid cannot put a Menorah in his window, because Bob is offended. So we did what the Romans did, establish a state religion. Everything you know, were taught in school, has changed. Not because the facts have 'evolved,' but to funnel you into a literacy level of about 6th to 8th grade. Quantum Theory, since Bikini Atoll has only 'proven' one incontrovertible thing, it can blow stuff up. Other than that, everything is hypothesis.

*The proliferation of preposterous hypotheses of the hypotenuse of the Major General's hippopotamus is both laborius and labotemus, I am the Major General I resolve by the quadratical of the magical uncertainty of Heisenberg's fanatical misuse of the Major General's hypothesis.*

this is from [Understanding Literacy & Numeracy](#)

level 4/5 is the ability to read complex information and glean information from it, or in numeracy, the ability to do algebra and above. You will note that only about 1 in 10 function at this level. The vast majority function at about 6th to 8th grade competency.

Wake up and smell the trash.

Standard English has changed 12 times just this century. This is more than once per decade, and is currently being replaced by Simplified English and Simplified Technical English ASD-STE100. The reason being that the functional level of literacy has required being so. The Simplified English is about a 1,000 word vocabulary, about the same as my Border Collie.
